

# Leading local care, Improving lives in Manchester, With you

## Neighbourhood workshops 2017

### What we did

Held workshops in 12 neighbourhoods across Manchester

With local people, voluntary sector, partner organisations, community groups and health and social care staff

Shared ideas for working together

Explored links between our services and communities

Mapped out trends in health and social care

Talked about what works - and what doesn't

Listened to each other

Looked at our strengths, connections and common ground

Discussed what we want for Manchester in the future

Over the next 10 years, MANCHESTER is recognised as a city where ALL residents live healthier, happier & longer lives

People & communities will be involved in decisions about their HEALTH & CARE

MANCHESTER is the WORLD leader in innovative, person-centred health & social care technologies

## We're building a new Local Care Organisation for Manchester

The LCO champions & invests in community development which addresses the social determinants of health & well-being

We will invest in information technology to maximise the potential of the health & social care economy

The communities of Manchester & the local care organisation will together transform health & social care building upon existing strengths & resources to create local, responsive & accessible services

We need an LCO that recognises the importance of the first 5 years of a child's life & is committed to working with families & communities to address life long inequalities

We need an LCO that works collaboratively to deliver seamless care within a culture of shared responsibility for the person not the problem

We need an LCO that can make the best use of existing resources using a sustainable model which reflects the local community to eradicate health inequalities

We need an LCO that actively cares and supports colleagues and communities
